General

From the Bracket index report on my pc - when I click on an individual's bracket it pops up. But once it is loaded up to the web nothing happens.

First, your browser must have java script enabled.

Second, you need to upload the template "bracket.htm" file which is created. (This is called the 'Javascript"
option and allows you to save the trouble of having to upload all the brackets individually).

You can go back to uploading all the brackets from Preferences, Reports tab and deselect the "Use Javascript
for Creating Brackets" checkbox.
